## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a cholesteric liquid crystal cell and applications, classified in class 349, subclass 77.
- II. Claims 19-43, drawn to an optical switch system, classified in class 385, subclass 16.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the switch does not necessitate reflected light to be circularly polarized and furthermore the switching matrix of crystal cells does not necessitate the relationship between the first and second cells as proposed in claim 1. The subcombination has separate utility such as a light source for a display.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the separate searches required for each, restriction for examination purposes as indicated is proper.

The application contains a plurality of disclosed patentably distinct species comprising:

Art Unit: 2882

(1) the specifics of the device comprised of a cholesteric liquid crystal cell unit in an embodiment of an optical switch device which corresponds to Figure 4;

(2) the specifics of the device comprised of a cholesteric liquid crystal cell unit in an embodiment of an add/drop multiplexer device which corresponds to Figure 5.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
